

# Parameter Table

October 24, 2014

Tim Bergsma

# 1 Purpose

This script picks up after model.Rnw to process bootstrap results and make a parameter table. It assumes the current working directory is the script directory containing this file.

# 1.1 Package

### Listing 1:

> library(metrumrg)

# 2 inputs

'wikitab' gives us a quick synthesis of 'rlog' and the 'lookup' of wiki notation in 1005.ctl. We do some science on the result first, and then some aesthetics for printing in a LATEXtable. Table ??.

### Listing 2:

```
> tab <- wikitab(1005,'../nonmem')
> tab$estimate <- signif(as.numeric(tab$estimate),3)
> tab$tool <- NULL
> tab$run <- NULL
> tab$se <- NULL
> tab$se <- NULL</pre>
```

```

```

# 3 variance

The estimates for the matrix diagonals are variances, and their square roots have special meaning. In model 1005, interindividual variability was modelled exponentially, in which case square root of variance gives an approximate CV; alternatively, and exact CV can be calculated. For proportional error terms like ERR1, square root gives an exact CV. For additive error terms like ERR2, square root gives standard deviation.

We can use functions of 'parameter' to sort out the various error components, as they are used in this model.

# 4 covariance

The estimates of matrix off-diagonals are covariances, and are more useful if transformed to correlations. We could extract the matrices manually, or use package shortcuts.

# 6 aesthetics

Here we format the table for printing.

# Listing 24:

```
> tab$name <- NULL
> tab$parameter <- NULL
> tab$model <- wiki2latex(tab$model)
> tab$estimate <- as.character(tab$estimate)
> tab$estimate <- paste(tab$estimate,'$', tab$units,'$')
> tab$units <- NULL</pre>
```

Note that no parameter defines more than one of CV, SD, and COR. We could collapse these into a single column, and add a descriptive flag.

# Listing 25:

```
> m <- as.matrix(tab[,c('cv','sd','cor')])
> tab$variability <- suppressWarnings(apply(m,1,max,na.rm=TRUE))</pre>
> tab$variability[is.infinite(tab$variability)] <- NA</pre>
> i <- is.defined(m)</pre>
> i[!i] <- NA
> tab$statistic <- apply(i,1,function(x){</pre>
   p <- colnames(i)[x]</pre>
   ifelse(all(is.na(p)),NA,p[!is.na(p)])
> toPercent <- with(tab, !is.na(statistic) & statistic=='cv')</pre>
> tab$variability[toPercent] <- percent(tab$variability[toPercent])</pre>
> tab$variability <- as.character(signif(tab$variability,3))</pre>
> tab$statistic <- map(tab$statistic,from=c(NA,'cv','cor','sd'),to=c(NA,'\\%CV','
   CORR', 'SD'))
> tab$variability <- paste(tab$statistic,tab$variability,sep=' = ')</pre>
> tab$variability[is.na(tab$statistic)] <- NA</pre>
> tab$statistic <- NULL
> tab$cv <- NULL
> tab$sd <- NULL
> tab$cor <- NULL
```

Table 1: Parameter Estimates from Population Pharmacokinetic Model Run 1005

description	model	estimate	prse	ci
apparent oral clearance	$\mathrm{CL/F} \sim \theta_1 \cdot \theta_6^{\mathrm{MALE}} \cdot (\mathrm{WT/70})^{\theta_7} \cdot \mathrm{e}^{\eta_1}$	9.51 $L/h$	9.75	(7.31,11.1)
